Note: There are three variants of this subsystem.

- RLB-09 for Jubilee
 - use an LDO motor
- RLB-09S for Jubilee
 - uses a StepperOnline motor
- RLB-09RC for the Railcore
 - uses an LDO motor

Each variant has a unique base plate. -09S uses a unique base plate and motor clip.

With a set of Needle nose pliers, bend the terminal lug upwards about 90 degrees along this line.
Do this for both terminal lugs.

Install the M3, 5mm setscrew such that it is fully inside the hub but does not stick out in the center bore.

Solder together the following limit switch harness.
Optional: insulate the solder connections with heat-shrink tubing.

Note wire lengths with respect to switch buttons.
Note: the KK Connector is included in the Duet2 box.

4	REL Extension Spring	1

This hole needs to line up with the flat part of the shaft. When you have confirmed this, compress both pulleys by hand while fully tightening the set screw.

Note: this is just a schematic representation. Join these parts loosely together on a flat table following the color coding.

Note: tape the spring guide to the table for ease of assembly.

Push each spring guide into the printed part until they hard-stop at about 10mm deep.

These two pieces can be sleeved together in a nylon sleeving, but leave at least 100mm exposed on the carriage side and 150mm exposed on the Lock side.

Push each Spring Guide into the hole until it hard-stops. Then apply two zip ties to secure each spring guide at the locking side..

ITEM NO	DESCRIPTION	QTY
1	1600 mm wire rope	1
2	Carriage Pulley Assembly	1
3	Spring Guide, 600mm long	2
4	Optional: Braided Cable Sleeving 350mm long	1

Loop the wire rope behind this screw at the halfway point and fully tighten the screw.

Tuck each loop of the wire rope into the closest hole.

Pop the wires out of each exit hole here.
See the next page for cinching details.

Leave some slack on both sides of the carriage for the next step.

B

Cinch both wire rope ends down very lightly (upper left image), just enough such that the wire rope cannot pop out. The location of where they are cinched doesn't matter now as they will be properly located later.

B

Once the wires are cinched, you may optionally take in the slack until there is no more excess wire rope on the carriage side (left image), but do not put tension into either side of the rope. This setup makes it easier to install on the machiner later.
